TYPOGRAPHICAL ERROR IN RFC 107

On page 5 of RFC 107, at the end of the section titled 'V. Flow Control', the partial sentence:

> Each of these numbers is interpreted as "the number of 128ths of the current allocation" to be returned if it is in the range zero to 128...

should read:

> ...if it is in the range zero to 127,...

That is, return all of the appropriate allocation if and only if the high-order or left-most bit of the corresponding fraction is 1.
